1. GHz refers to internal clock speed of the processor. Other factors besides clock speed may impact system and application performance.
2. AMD's numbering is not a measurement of clock speed. For AMD processors that are 64-bit enabled and dual, triple, or quad core enabled. This system requires a separately purchased 64-bit operating system and 64-bit software products to take advantage of the 64-bit processing capabilities of AMD technology. (Dual or triple or quad) core processing available with AMD technology is designed to improve performance of this system. Given the wide range of software applications available, performance of a system including a 64-bit operating system and a (dual or triple or quad) core processor will vary. For AMD processors that is just 64-bit enabled, not dual/triple/quad/core enabled, i.e. Athlon 64. This system requires a separately purchased 64-bit operating system and 64-bit software products to take advantage of the 64-bit processing capabilities of the AMD 64 processor. Given the wide range of software applications available, performance of a system including a 64-bit operating system will vary.
3. This system may require upgraded and/or separately purchased hardware and/or a DVD drive to install the Windows 7 software and take full advantage of Windows 7 functionality. See www.microsoft.com/windows/windows7/ for details.
4. High definition (HD) content is required to view HD images.
5. For hard drives, GB = 1 billion bytes. Actual formatted capacity is less. Up to 12GB of system disk is reserved for system recovery software.
6. Actual formatted capacity is less. Up to 8GB of hard drive reserved for system recovery software.

7. As Blu-Ray is a new format containing new technologies, certain disc, digital connection, compatibility and/or performance issues may arise, and do not constitute defects in the product. Flawless playback on all systems is not guaranteed. In order for some Blu-Ray titles to play, they may require a DVI or HDMI digital connection and your display may require HDCP support. HD-DVD movies cannot be played on this Desktop PC.
8. Actual speeds may vary. Don't copy copyright-protected materials. Double layer is a new technology. Double layer media compatibility will widely vary with some home DVD players and DVD-ROM drives. LightScribe creates a monochrome image. LightScribe media required and sold separately.
9. Note that DVD-RAM cannot read or write to 2.6GB Single Sided/5.2 GB Double Sided – Version 1.0 media.
10. The specifications for the 802.11n WLAN are draft specifications and are not final. If the final specifications differ from the draft specifications, it may affect the ability of the notebook to communicate with other 802.11n WLAN devices.
11. Mini/Reduced flash memory cards require separately purchased adapter.
12. Battery life will vary depending on the product, model configuration, loaded applications, features and power management settings. The maximum capacity of the battery will decrease with time and usage.
